

## CORRECT INSTALLATION

## **IMPORTANT INSTALLATION & WARRANTY CONDITIONS**

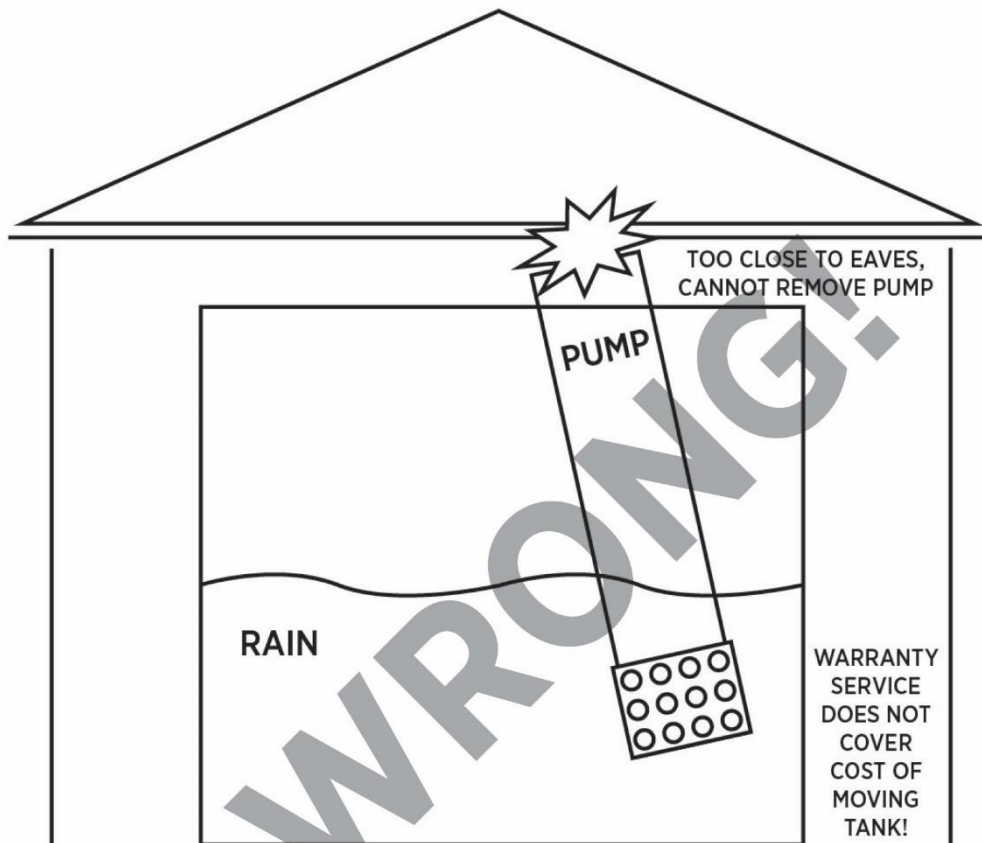

# **RPS036 - RPS036F - RPS050 - RPS050F SUBMERSIBLE PUMPS**

1. If the premises does not have an RCD (safety switch), DO NOT INSTALL.
2. The pump must be easily accessible for servicing or repair.
3. Ensure the connection to the pump INSIDE the tank is VERY robust - you must use 15 wraps of thread-seal tape on the MI fitting to prevent the pump rotating itself off the fitting. (This will lead to pump cycling which is not covered by warranty).
4. If the pump has a float switch, ensure it CANNOT get stuck on the side of the tank or under baffles or similar - warranty service does not cover this situation.
5. Include a Barrel-Union external of the tank to allow easy servicing or repair.
6. For underground tanks, the installation must be designed and constructed to allow easy access, for servicing or repair of the pump, warranty does not include costs of digging up gardens etc!
7. All Electrical Wiring must be in accordance with Australian Standards, no warranty applies if not.

## INCORRECT INSTALLATION

## INCORRECT INSTALLATION

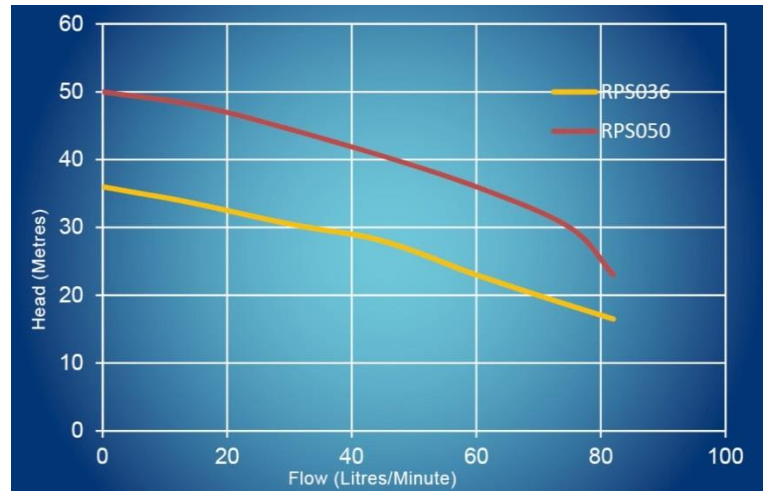

NO APPLIANCE LASTS FOREVER. INSTALLATION MUST ALLOW FOR REMOVAL FOR SERVICING OR REPAIRS.

## INSTRUCTION MANUAL & WARRANTY – REEFE RPS036 & RPS050

### Multistage Submersible Pump

**\*\* Please leave this guide in a safe place for the owner \*\***

### PERFORMANCE DATA

CODE	MODEL	POWER			RATED		MAXIMUM		FLOAT SWITCH	CABLE LENGTH	OUTLET (mm)	SIZE L x W x H (mm)
		AMPS	P1 (kW)	P2 (kW)	FLOW (L/min)	HEAD (m)	FLOW (L/min)	HEAD (m)				
12178	RPS036	3.5	0.8	0.45	40	28	100	37m	-	10m	25FBSP	150 x 160 x 650
12185	RPS050	4.6	1.2	0.75	50	38	100	50m	-	10m	25FBSP	150 x 160 x 800
13588	RPS036F	3.5	0.8	0.45	40	28	100	37m	Yes	10m	25FBSP	150 x 160 x 650
15582	RPS050F	4.6	1.2	0.75	50	38	100	50m	Yes	10m	25FBSP	150 x 160 x 800

NOTE: Performance data quoted is generally from test data and does not take into account factors in the installation such as loss of pressure and flow due to pipework & pipe-fittings & valves.

### INSTALLATION GUIDELINES

Please read and follow the instructions which are to be read in conjunction with the diagrams on the earlier pages. Ensure all installations are in compliance with any relevant Australian Standards, this is the installers responsibility. Warranty covers manufacturing defects of the pump; it does not include faults in the installation. Note that all warranty is voided if the instructions are not followed. Use for CLEAN FRESH WATER only.

## IMPORTANT INSTALLATION & WARRANTY CONDITIONS

- 1) **A "First-flush-diverter" or similar device must be installed, and /or a filter screen through which all the incoming water passes before entering the tank,** to prevent debris from entering the tank.
- 2) **Warning: when lowering Pump into Rainwater Tank:** Use the rope supplied to lower the pump into the tank. DO NOT USE THE POWER CABLE. Using the power cable will lead to pump failure which will not be covered by warranty, all costs will be borne by the installer.
- 3) **Install the pump UPRIGHT in the tank.** The length of the pump must be vertical, it must not be on an angle off vertical, it must not be horizontal.

- 4) DO NOT install it in such a manner that it would require a person to get inside the tank to remove/repair it.
- 5) **You MUST use 25mm or larger POLY or PVC pipe** connected to the discharge of the pump. DO NOT CONNECT COPPER or GALV PIPE or less than 25mm ID POLY/PVC PIPE to this pump.
- 6) VERY IMPORTANT: **Ensure that the connection to the outlet of the pump is robust and sealed VERY well.** Use 15 wraps of thread-seal tape on the male thread. DO NOT USE glue unless you are CERTAIN that you will not drip glue inside the pump.
- 7) **Glue or other substances dripped inside the pump voids warranty.** Do NOT fit threaded fitting to the pump then glue pipe to that fitting as glue will drip inside the pump. Glue the fitting and allow it to dry BEFORE attaching the threaded fitting to the pump. NOTE: If the fitting leaks, it will cause cycling of the pump, this is not warranty – this is the installer’s responsibility.
- 8) Ensure that the pump will not knock against the side of the tank during start-up, or operation or stopping.
- 9) **No electrical appliance lasts forever** - the pump must be easily accessible for repair or servicing - if the rainwater tank is installed under eaves, or under a deck or any other structure, ensure the pump can be easily removed.
- 10) For **underground tanks**, the installation must be designed and constructed to allow easy access, for servicing and repairs to the pump. In the unlikely event of pump failure, warranty does not include costs of digging up gardens and re-running electrical cables, etc.
- 11) **If the pump has a float switch, ensure it CANNOT get stuck** on the side of the tank or under baffles or similar - warranty service does not cover this situation. FOR PUMPS WITH FLOATS: The water level will need to be 0.6m to 1.2m high inside the tank, for the pump to start.
- 12) An Isolation valve must be fitted (ball-valve or gate-valve) in the discharge pipework**
- 13) A Barrel-Union must be fitted external of the tank to allow easy servicing of the pump, install it after the elbow to avoid it twisting loose from the pump starting & stopping.
- 14) It is the INSTALLERS responsibility to check the pumps operation prior to leaving the site CHECK ALL CONNECTIONS: Ensure all fittings and joints are watertight and airtight. Leaks will cause the pump to cycle on & off continuously, this is not a fault of the pump.
- 15) All Electrical Wiring & Power Outlet & Cable protection must be in accordance with applicable Australian Standards. We recommend a separate circuit.

- 16) IRRIGATION USE - MANDATORY REQUIREMENTS FOR ALL INSTALLATIONS: ***For any installation of pumps supplying irrigation, you must fit an 18L or larger pressure tank.***  
Set tank air pressure: RPS036 set air pressure to 250kPa, RPS050 set air pressure to 350kPa
- 17) IMPORTANT NOTICE RE THE STOPPING FUNCTION: ***In some situations the pump will cycle a few times after each use. THIS IS NOT A WARRANTY FAULT,*** it is a normal function of the internal pump controller releasing excess pressure when there is some “bounce” or “give” in the pipework or connected fixtures – it is often caused by toilet cisterns or a short discharge pipe or flex in pipes. It is not a fault with the pump. If the owner does not want this to occur, install a 2L or larger Pressure Tank, set the tank air pressure: RPS036 set air pressure to 250kPa, RPS050 set air pressure to 350kPa.
- 18) IF THE PUMP BLEEDS OUT OF THE TOP After startup, the pump may bleed water out of the top of the pump – this is NOT a fault, it is the normal operation of the pump.
- 19) ***Some air can be pumped when the tank is low in water*** – this is not a fault it is normal operation.
- 20) **NO RCD/SAFETY SWITCH? DO NOT INSTALL PUMPS!!**

#### **FURTHER INFORMATION FOR THE INSTALLER**

- 21) Try to minimise the amount of bends in the delivery pipe. Pipes of insufficient diameter connected to the pump will severely restrict the performance of the pump, cause the pump to use more electricity, and may cause the pump to cycle on/off frequently, this is not covered by warranty as it is caused by the installer. If the user requires the best possible pressure from the pump, the recommendation is for the delivery pipe to be 25mm ID for the majority of the pipeline.
- 22) **IRRIGATION USE TANK PRESSURE SETTING:** Air pressure must be set at 70% of maximum pump pressure – set the tank air pressure: RPS036 set air pressure to 250kPa, RPS050 set air pressure to 350kPa. The Pressure Tank is simply fitted to the discharge pipework with a “tee”, anywhere between the pump and the first point of discharge.
- 23) **During installing or servicing** disconnect the pump from the power supply.
- 24) **Ball-valves or gate-valves must be fitted on the discharge, and the Town-water backup supply where fitted.** An additional Check-valve must be fitted outside of the tank (not on the pump) where it is used with a Town-water backup system, but only if the Town-Water backup system does not have a built-in check-valve on the Rainwater connection. This instruction is a condition of warranty; all warranty is void if this instruction is not followed. The pump must be installed to comply with applicable Plumbing Regulations.
- 25) **Do not remove the base off the pump** as this will then cause it to take in solids or sludge which will lead to reduced performance and ultimately, failure, which is not covered by the warranty. This pump is not to be used as your sole water supply. For critical applications where loss of water supply could cause serious consequences, use a DUAL PUMP System so you have a back up water supply or use a TOWN-WATER BACK-UP SYSTEM. This pump is not designed for Fire Fighting purposes.
- 26) **IMPORTANT:** This pump MUST NOT be installed in any manner that if it were to fail that it would cause damage or loss to property or persons. It MUST be installed in a well-ventilated and drained area.
- 27) DO NOT lower or lift the pump using the power cable – use nylon rope to lower or lift the pump in and out of the tank.

- 28) The pump will operate fully automatically, it will start on demand when pressure drops below approx 200kPa, and will stop when demand ceases, after pumping for some minutes to regain full pressure. It may turn on & off a few times, refer point 16
- 29) **ELECTRICAL SUPPLY:** (a) Plugging into existing outlets that have other appliances connected may cause low voltage supply to the motor, causing the circuit-breaker to trip, tripping of motor overload, or burnt out motor, which will not be covered by the Warranty. RECCOMENDATION: a dedicated electrical circuit with a combination circuit breaker & safety switch be installed for ALL pump types. This is important in order to prevent inconvenience to the resident, is an additional safety precaution, and also helps to avoid un-necessary call-outs after hours and on weekends. (b) Surge Protection - We recommend that a surge protector is used to protect the electronics of this pump, as damage due to power surges is not covered by the Warranty. (c) ***The Power Outlet must be in easy reach for the owner to access, and must be in a sheltered area to prevent the plug and power outlet getting wet from rain or snow or garden irrigation or the roof gutters overflowing, etc.*** VOLTAGE of power supply must match the voltage of the pump, 230-240Volt from MAINS supply only. Do not use with generator power. If you only have generator power, you will need to have the pump removed and replaced with a different type with a Pressure Tank and Switch, at additional cost. The Pressure Controller will be damaged by the voltage fluctuations caused by generators.
- 30) **LEAK PROTECTION FUNCTION;** If the pump starts and stops more than 7 times in 2 minutes, it will stop operation automatically. Frequent starting and stopping usually indicates something is leaking. Investigate the cause and rectify the leak. Toilet Cisterns are often the problem, turn their stop-cock off to eliminate this possibility. After the cause is fixed, turn the power off to the pump, and then back on again, to reset the automatic controls. If the cause cannot be ascertained, fit a Pressure Tank somewhere between the pump and the first point of discharge – suggested pressure setting for the tank is 150kPa.
- 31) **NO WATER FUNCTION:** The pump will stop automatically if the tank is empty/nearly empty. **VERSION WITHOUT FLOAT SWITCH:** It will then restart to check for water after some minutes, then off for 1 hour and restart again, then off for 5 hours then restart again, if there is no water it then is off for 24 hours, and will restart automatically every 24hours, indefinitely. If there is no rain expected for some days, turn the power off at the power outlet to save power. **VERSION WITH FLOAT SWITCH:** when the water level drops below about half of the height of the pump it will turn off the power to the pump, the pump will not restart until the tank fills up again.
- 32) **WARNING:** these pumps are not designed for and must not be installed in locations classified as hazardous.
- 33) **THE FOLLOWING MAY CAUSE SEVERE DAMAGE TO THE PUMP AND WILL VOID WARRANTY;** (a) Using an extension cord to power the pump. (b) Cutting the earth pin off the plug or using an adapter fitting or double adapter. (c) Working on the pump while connected to the power supply. (d) Removing motor housing, or disassembling the pump housing, except by a qualified technician (e) Pumping chemicals or corrosive liquids or flammable liquids or dirty water or waste water or contaminated water. (g) Pumping hot liquids (Exceeding 35°C) (h) Using a generator for power supply – see 27
- 34) **OVERLOAD PROTECTION** This pump has a built in thermal protection switch. The pump stops if a high-temperature condition occurs. The motor restarts automatically after it has cooled down when the built in thermal protector resets itself. Or you may need to turn the power off and on again to reset it. If this problem reoccurs - check for possible causes – refer to trouble-shooting.
- 35) **IMPORTANT NOTES** (a) Do not switch the pump on and off frequently, as this will cause damage to the electronics and void warranty. (b) If there is insufficient water, the motor will stop. (c) If the pump is idle for a long period of time or in very low temperature, the water should be drained to avoid damage to the pump and/or stagnation of water.

All warranty is void if these instructions are not heeded and no liability can be accepted in the case of damage or loss caused by failing to comply with all the instructions.

## **DANGER!!!**

Keep the pump equipment protected from interference by children, infirm persons, incompetent persons, pets and wildlife.

## **WARNING!!!**

This pump is designed for clean fresh water only, in non-hazardous locations.

It must NOT be used as a continuous duty fountain pump, or to pump dirty water, or to pump liquids other than clean water.

## **WARNING!!!**

***It must never be used in bodies of water used for swimming or bathing or in animal drinking containers.***

### **PUMP CONTROLLER FUNCTION AND OPERATION:**

The pump controller inside this pump is designed to be almost completely automatic, and will restart itself if the pump runs out of water; you should not normally need to do anything. Instructions and basic function;

- a) Use for CLEAN rainwater only
- b) Do not operate on domestic generator power supply as this may damage the electronics
- c) Points d) to h) do not apply to pumps WITH FLOAT SWITCH – the float turns the power OFF to the pump when water level is low, it will not turn back ON until the tank fills up again.
- d) The pump controller will stop the pump if there is no water in it
- e) It then rechecks for water several times – it makes the pump start each time, to try and “re-prime” itself (fill it back up with water) It might “crackle & gurgle” due to air in it, as it tries to restart, this will do no harm to the pump. Air and water mix may come through the pipes when this happens, this is not a warranty fault.
- f) It will check for water after some minutes, then off for 1 hour and restart again, then off for 5 hours then restart again, if there is no water it then is off for 24 hours, and will restart automatically every 24hours, indefinitely.
- g) If it happens to do this in the middle of the night it can be annoying to the residents. In the early morning, turn it off & on again after 1 minute and it will reset itself so it does the checking in daylight hours.
- h) You can reset the function back to the beginning anytime by turning the power off, and on again after 1 minute.
- i) If it is some days before it is expected to rain, turn off the power to the pump, at the power outlet, to save power.
- j) When the pump re-starts after a run-dry event, some air might come through the pipes, this should do no harm, and is not a warranty fault.

### **TROUBLESHOOTING CHECKLIST**

Check the following before requesting service or repair. A call out fee and labour cost may apply to field services.

#### **PROBLEMS & POSSIBLE CAUSES:**

**1. Pump Operates When Water Tank Is Empty:** this is either the normal re-start function of the pump, or due to an airlock, or some debris inside the pump > simple solution is to turn the power off to the pump, and turn it back on when rain fills the tank.

**NOTICE:** tank level indicators are not always accurate!! Check inside the tank to be sure of the water level.

#### **2. Pump does not run or motor runs for a short time, then stops**

1. Circuit breaker or Safety Switch is off or fuse has blown > in a SAFE manner investigate why this has occurred, by process of elimination > do not assume it is the pump > if you cannot do this safely, have a licenced Electrician check and rectify it.

2. Water level in the tank is too low > Top up or use alternative supply > or turn pump off until the tank fills

3. Electrical components have been flooded > It is likely that the pump will need to be replaced > in a SAFE manner investigate why this has occurred, by process of elimination > do not assume it is the pump > if you cannot do this safely, have a licenced Electrician check and rectify it.

4. Pump plug is not connected properly, or has been flooded or wet > Isolate power at main switch, remove plug & allow to dry. If the problem continues, contact a licenced electrician to check the cause.

5. Pump has an air-lock > Start and stop several times by turning the power off, wait 30 seconds, and turn on again, repeat if necessary.

6. If all of the above are OK, the pump might have overheated and triggered the thermal overload switch > Turn it off and wait 30 minutes for it to cool down and turn it on again > If the pump does not operate normally, investigate why, it might be blocked with debris, > flush clean and re-assemble.

### **3. Pump runs but does not deliver water or only a small amount of water**

1. Water filters on the discharge (if fitted) are clogged > check / clean /replace the cartridges

2. Check valve is installed backwards, arrow on valve should point in direction of flow > have the installer fix this.

3. Discharge shut-off valve/ball-valve / gate-valve may be closed > open the valve.

4. Impeller or volute openings are fully or partially clogged or it might be blocked with debris > disconnect from the power supply, and if you are competent to do so, disassemble the pump and clean. If not, have a pump technician do it for you.

5. Pump is air-locked > Start and stop several times by turning it on and off with 20 seconds between. If this does not work, see below regarding re-priming the pump

6. Vertical pumping distance is too high - Reduce distance or upgrade to a larger pump.

7. Tank too low water level > Check the water level by looking inside the tank (Tank level indicators can be wrong)

### **4. Pump runs and does not stop or runs when no taps are in use**

1. In most cases this situation it is due to a leak in pipework or leaking toilet cisterns or an underground pipe leak (wet soil, muddy, grass growing well!) > it is not a pump fault > ascertain by process of elimination what is leaking > turn off the isolation valve on the discharge pipework > does the pump stop = the leak is further down the line > if not then check toilets etc > the only sure way to check toilet cisterns is to turn them off at the stopcock which is usually under the cistern as most of them will not run into the pan.

2. The pump has come loose off the pipe inside the tank > look inside the tank with a torch to check this > if the water is above the pump you will need to lower the water level so you can check this properly > if there is water leaking inside the tank have the original installer return and rectify this, it is not covered by the pump warranty as it is an installation issue.

3. There is a leak in the pipework inside the tank > reduce the water level in the tank until you can see the top of the pump, open a tap to a slow dribble so the pump starts, then remove the leaf-trap off the tank and use a bright torch to inspect the pipework inside the tank to see if it is leaking – even a slight leak will cause the pump to cycle on/off/on/off > if there is water leaking inside the tank have the original installer return and rectify this, it is not covered by the pump warranty as it is an installation issue.

### **5. Pump not pumping properly**

1. Too high head or pump under specified > Check specifications.

2. Too low water level > Check the water level in the tank, tank level indicators are not always accurate

3. If a check valve has been installed directly on the discharge of the pump, this will cause the pump controller to malfunction > Move the check valve to outside of the tank.

### **6. Safety Switch (RCD) or Circuit Breaker trips when the pump starts**

1. Circuit is overloaded with too many appliances connected to it > contact a licenced electrician to install additional circuit

2. Power plug is wet > refer 2.3

3. If none of the above, the Motor may be defective > have it checked by a qualified technician

***If you have checked all the above trouble shooting points and fail to rectify the problem, have the pump checked by an experienced pump technician.***

**WARNING!! ELECTRICAL PRECAUTIONS**

Before servicing a pump, always shut off the power supply and then make sure you are not standing in water and that there is no risk of electrical shock.

If the pump is direct-wired to the electrical circuit, contact a qualified licensed electrician to disconnect it before attempting any repairs or servicing.

***DO NOT ATTEMPT ELECTRICAL REPAIRS OF ANY SORT UNLESS YOU ARE A LICENSED ELECTRICIAN***

PARTS: Enquire for parts availability as most are not stocked. Repair should not be attempted by unqualified persons and consideration should be given to the economics of attempting repair.

**INSTALLATION CHECKLIST: MUST BE FILLED IN FOR WARRANTY TO APPLY**

Installer Name: ..... Phone Number: .....  
Qualification: ..... (write Owner if applicable)  
If installed by a Plumber or Electrician – Licence No: .....  
Installation Address: .....

Tick the boxes as the item is completed/correct, put n/a if not applicable;

- The Pump is being used for an appropriate purpose for which it is intended, according to the instructions
- The Power Circuit the Pump is connected to is RCD (Safety Switch) Protected
- All swarf has been removed from the tank after cutting openings etc.
- Barrel Unions are fitted on the pipe connections for easy removal & replacement
- Pipe is sized appropriately for the application (diameter and length)
- The installation is constructed so the pump can be easily removed or replaced.
- If applicable: The pump is installed in accordance with National & Local Plumbing Regulations
- The Electrical Supply cable of the pump is plugged into a Power Outlet that is in accordance with the current standard of Electrical Safety Regulations AS/NZS 3000 – or the pump has been wired directly to the power circuit by a Licenced Electrician, with a suitable isolation switch in an easily accessible area.
- The Pump has been started, tested, and operates correctly.
- The pipes and connections and the barrel-union on the pump, and toilet cisterns (if connected) have been checked for leaks.

**WARRANTY RECORD - FILL IN AND RETAIN THIS WITH YOUR ORIGINAL PURCHASE RECEIPT**

PURCHASER NAME..... PHONE NO.....

DATE OF PURCHASE ...../...../..... DEALER/STORE NAME.....

DEALER SUBURB/TOWN..... PHONE NO.....

BRAND & MODEL NUMBER OF PUMP..... SERIAL/BATCH NUMBER.....

Do NOT send this form to us, retain it for your record.

## **WARRANTY CONDITIONS**

1. Our goods come with guarantees that cannot be excluded under the Australian Consumer Law. If you are a consumer as defined by the Australian Consumer Law, you are entitled to a replacement or refund for a major failure and for compensation for any other reasonably foreseeable loss or damage. You are also entitled to have the goods repaired or replaced if the goods fail to be of acceptable quality and the failure does not amount to a major failure. The following conditions form part of the instructions and do not over-ride your statutory rights.
2. This warranty against defects covers failure due to manufacturing defects within the period as stated in the table below from the date of original purchase, for SUBMERSIBLE or EXTERNAL CONSTANT PRESSURE PUMPS and RAIN-TO-MAINS SYSTEMS, supplied by ASCENTO GROUP AUSTRALIA that are purchased and used in mainland Australia. In the case of a failure caused by a defect in the product, within the specified period from the date of original purchase, you can return it to the place of purchase for a refund or you can request for us to arrange for the pump to be repaired.
3. Faults or losses or failure caused due to but not restricted to any of the following: improper use, improper installation, foreign objects inside the pump or pump controller, normal wear and tear, accidents, misuse, lack of maintenance, not following the installation instructions, damage caused by lightning strike, or power surges, or power spikes or power brownouts, or operating the pump on power other than correct mains power, or operating the pump on power supplied by a domestic generator, power supply of voltage less than 230V, power supply of voltage above 240V - are not covered by warranty. Improper use is defined by us, at our sole discretion.
4. The complete Impeller set (including shaft), Seals and O-rings are all wearing items and therefore are not covered for "normal wear and tear". They are covered by this warranty if they fail due to a manufacturing defect. The Warranty also excludes accidental or deliberate breakages, fading or breakdown due to the effect of exposure to sunlight or chemicals or any other external factor that may affect the life of the product.
5. Warranty will be void if any tampering or removal of identification labels or electrical cables has occurred, or any non-genuine parts have been fitted, or repairs have been carried out by unqualified persons. No warranty applies for goods sold or used for HIRE or RENT or LEASE. No warranty applies, and no liability is accepted, if the pump is used in circumstances that we define as: HAZARDOUS SITUATIONS, MINE SITE, REMOTE AREA, INDUSTRIAL APPLICATION, or any other UNSUITABLE APPLICATION, all of these circumstances are defined by us at our sole discretion.
6. This product is guaranteed as fit for the purpose of pumping CLEAN FRESH WATER for normal domestic household use, and for NO OTHER USE. Performance data quoted is generally from test data and is approximate and does not take into account factors in the installation such as loss of pressure and flow due to pipework & pipe-fittings & valves. It is the purchaser's responsibility to ensure that the product is fit for their purpose and of sufficient size & performance for their application.
7. IMPORTANT: No electrical appliances last forever. Therefore, ALL installations of these pumps and valve-sets supplied by us, must be constructed to allow the owner to easily remove them for servicing, and to easily remove them for replacement, warranty replacement or upgrading. The installation must NOT be constructed in such a manner that specialized tools, or paid tradespersons, or external paid contractors, are required to be engaged in order to remove and/or replace and/or refit the pump, therefore all pumps must be installed using barrel-union connections to facilitate easy servicing or replacement. If the rainwater tank is installed under eaves or other structure such as a deck, ensure that the pump can be easily removed for servicing or repairs. Warranty replacement does not normally include costs of removal and re-installation as we have no control over the method of installation.
8. Before installing or servicing disconnect from the power supply. A ball-valve or gate-valve must be fitted on the suction, and the Town-water backup supply where fitted. A "First-flush-diverter" or similar device must be installed to prevent debris from entering the tank, or a filter screen through which all the incoming water passes before entering the tank. A Y-Strainer or Pre-filter must be installed: (a) For external pumps on the suction (inlet) pipe and (b) For submersible pumps on the discharge before the pump controller (for where there is an external pump controller) - to prevent particles entering the pump and fixtures and fittings including non-return valves. This instruction is a condition of warranty; all warranty is void if this instruction is not followed.
9. This pump is not to be used as your sole water supply. For critical applications where loss of water supply could cause serious consequences, use a DUAL PUMP System so you have a backup water supply or use a TOWN-WATER BACK-UP System.
10. This pump MUST NOT be installed in any manner that if it were to leak or fail to work that it would cause damage or loss to property or persons. It MUST be installed in a well-ventilated and drained area. All warranty is void if this condition is not heeded and no liability can be accepted in the case of damage or loss caused by failing to comply with this condition.
11. The Pump must be connected to a suitable circuit with an integral RCD (safety switch) in the circuit breaker. All warranty is void if this instruction is not followed.
12. RIGHT TO INSPECT: We reserve the right to inspect the product and installation, prior to accepting any warranty claim. We may inspect by use of drone technology, with property owners permission. We also reserve the right to request and require photographs or video evidence in lieu of physical inspection, at our sole discretion. Refusal of inspection cancels all warranty and liability.
13. This warranty does not exclude any non-excludable rights according to Australian Law. However any condition that is made void by Australian Law does not void the remaining conditions, which shall stand unaltered.
14. In the case of a fault, refer to the Trouble Shooting Guide first. If these steps do not rectify the problem, and the fault is due to a manufacturing defect or product failure not caused by improper installation, improper use or lack of maintenance, return the faulty appliance to the original place of purchase with proof of purchase for replacement or refund. Alternatively you can mail us at PO BOX 650 MORNINGSIDE QLD 4170 or send an email to [csv@ascento.com.au](mailto:csv@ascento.com.au) with copy of your purchase receipt, a description of the problem, and your name and address and phone number - we will review your request and send you a replacement directly if we accept your warranty claim. Or call us on 1800 807 604 with the above information; however we will always require a copy of your purchase receipt. If an exact replacement is not available, the closest equivalent product will be supplied at our discretion. Do not send the product to us unless we ask you to do so
